Professional Summary

Full stack software engineer with a frontend focus and a strong design background, specializing in building polished, high-performance web experiences with **React**, **Next.js**, and **Redux**. Experienced collaborating across full stack systems, partnering closely with **Node.js** and **Golang** backends. Skilled at translating design systems into responsive, scalable interfaces with attention to detail and usability. Thrives in fast-paced startup environments, crafting maintainable, user-centered solutions that evolve alongside product and design needs.

Work Experience

Software Engineer @ Sigma Computing (Nov 2024 — Present)

- Developed front-end features using **React** as part of the App Writeback team.
- Helped build and maintain an in-house UI framework based on **React Aria Components** to ensure accessibility and design consistency.
- Collaborated on backend services using **Golang** and **Node.js** to support new product features.
- Partnered closely with design and product to clarify requirements and technical designs.
- Addressed and resolved internal and external feedback relayed by support engineers, including urgent response as the team on-call engineer.
- Developed projects aligned with company initiatives of data-driven AI applications.

Selected Product Initiatives

Lead Engineer, File Columns

- Led the inception and delivery of a new File Columns product, unlocking new customer use cases and supporting customer adoption and revenue growth (currently in use by **71** enterprise customers accounting for **\$2.2M+ ARR**).
- Partnered with PMs and external enterprise customers to define product scope, validate requirements, and prioritize features based on real-world workflows.
- Developed backend storage integrations supporting multiple bucket providers (**AWS, GCP, Azure**), ensuring scalable, secure, and reliable file persistence.
- Expanded platform interactivity by developing a file upload form control and integrating File Columns with Sigma's actions and workflow system, enabling advanced data app use cases.

Lead Engineer, Single/Multi-Select Columns

- Developed single-select and multi-select column functionality in input tables, addressing high customer demand and improving overall usability and flexibility.
- Enabled a broader range of AI app scenarios by integrating enhancements with Sigma's actions and workflow system, expanding the platform's interactivity and automation capabilities.

Software Engineer @ Circolo (Jul 2023 — Nov 2024)

- Led web development using **Next.js**, **React**, and **Redux** for dynamic, scalable web applications.
- Delivered **3+** mobile-optimized **progressive web apps** with offline capabilities.
- Managed cloud deployments on **AWS**, **Heroku**, and **Cloudflare** for scalable performance.
- Integrated AI solutions leveraging the **ChatGPT API** through **few-shot prompt engineering**.
- Conducted **usability and A/B testing**, driving a **28%** increase in client satisfaction.

Selected Product Initiatives

Project Lead, Remy Hospitality Platform

- Led the development and design of an interactive menu and promotional display system for the hospitality industry, driving a **150%** increase in client acquisition.
- Designed AI-driven **computer vision** to automate the digitization of physical menus, reducing processing time by **80%** and streamlining operations for clients.
- Oversaw integration with in-house hardware, ensuring seamless experience.

Education

2023 Cornell University, M.Eng. in Computer Science (**GPA: 3.82**)

2021 Cornell University, B.S. in Information Science (Minors in Computer Science & Game Design)

Technical Skills

Frontend: Next.js, React, Redux, Zustand, Stitches, TypeScript **Backend:** TypeScript, Golang, SQL, Python
DevOps & Platforms: GitHub Actions, Git, Linux, Sentry, AWS, Heroku, Cloudflare, Shopify, Bash
